Create repository

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?
[Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner *

Repository name *

Great repository names are short and memorable. Need inspiration? How about [laughing-carnival](#) ?

Description (optional)

Public

Private

Initialize this repository with:

Add a README file

This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template:

None

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

License:

None

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

You are creating a public repository in your personal account.

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# own" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/23ad271/own.git
git push -u origin main
```

...or push an existing repository from the command line

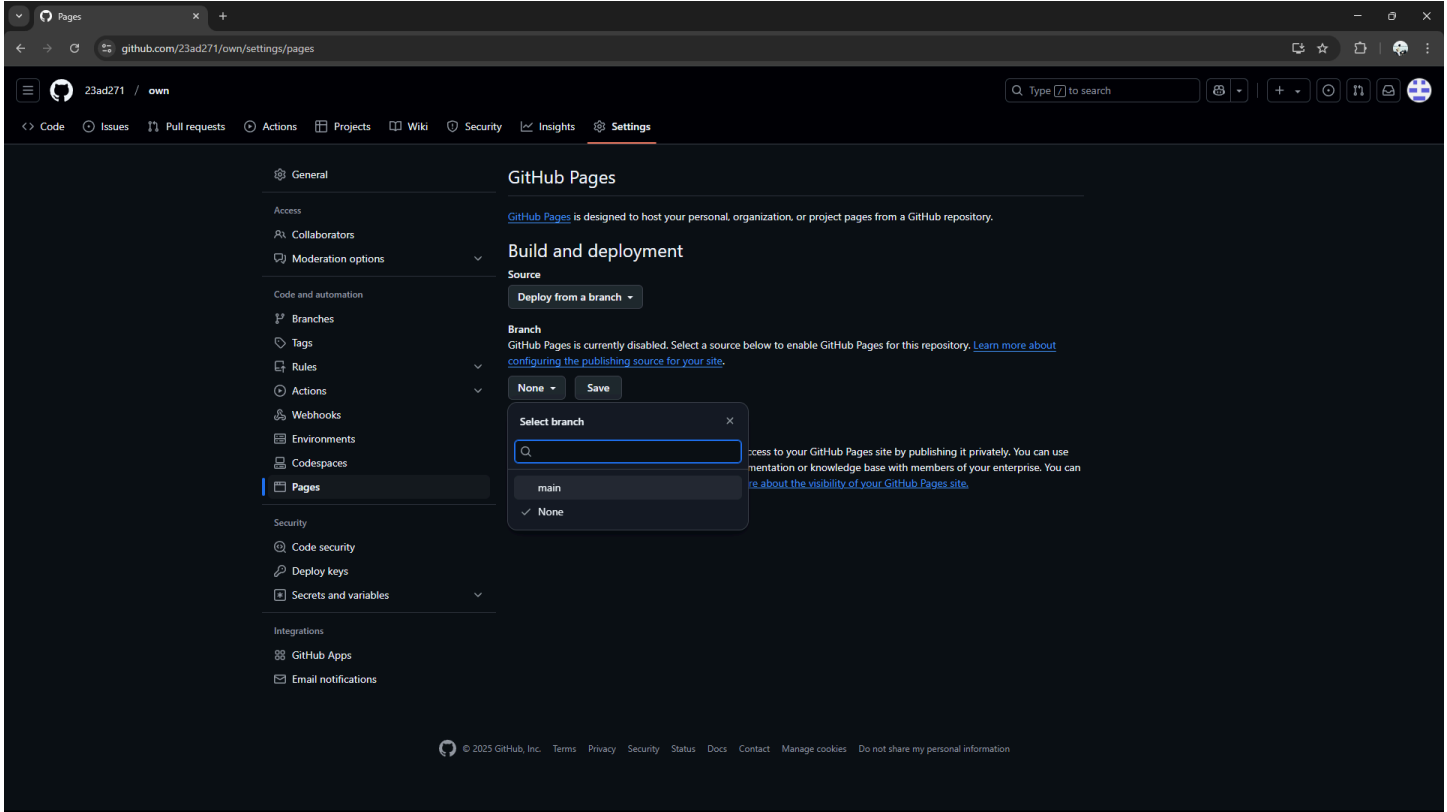

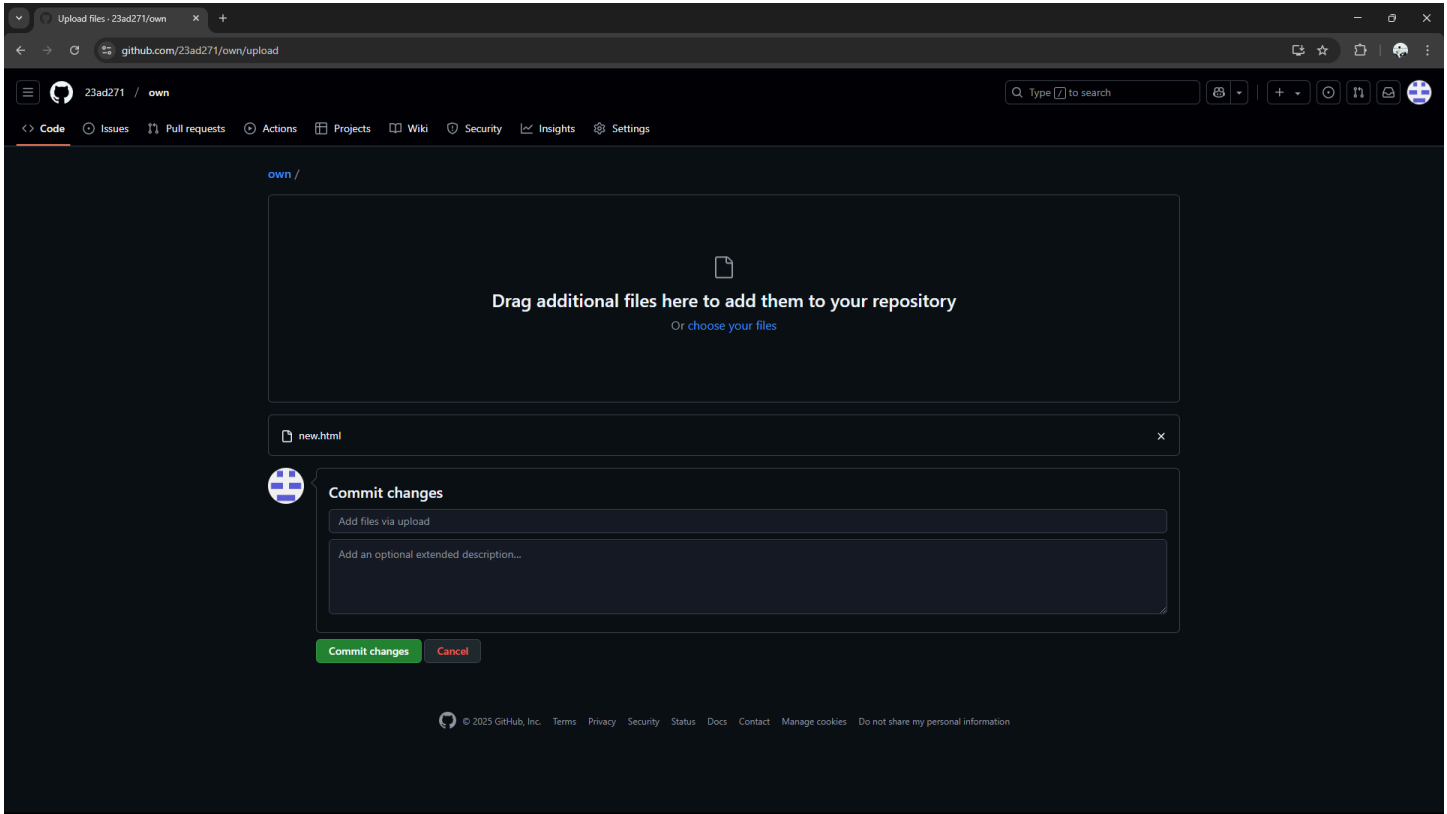

```
git remote add origin https://github.com/23ad271/own.git
git branch -M main
git push -u origin main
```

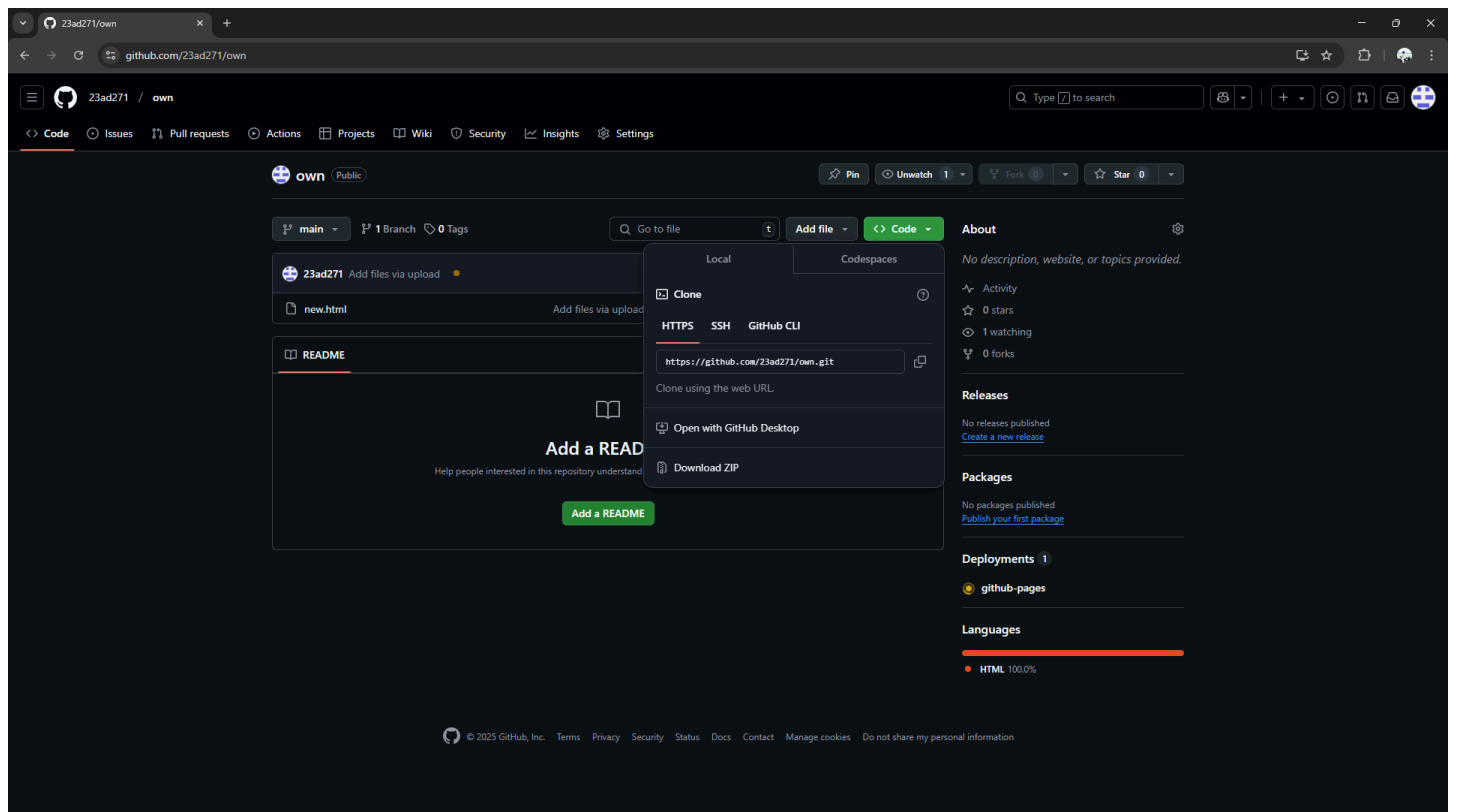

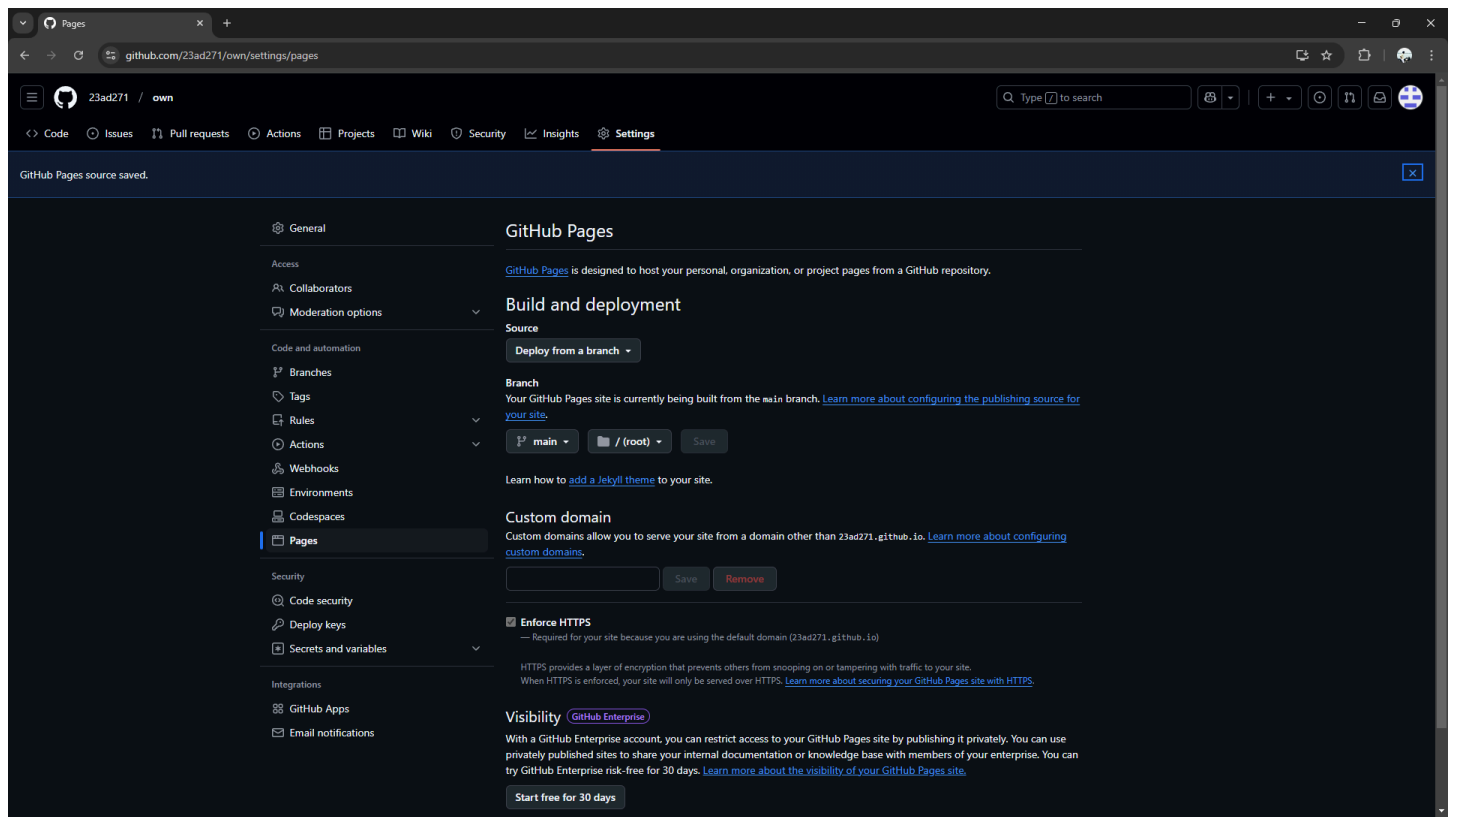

ProTip!

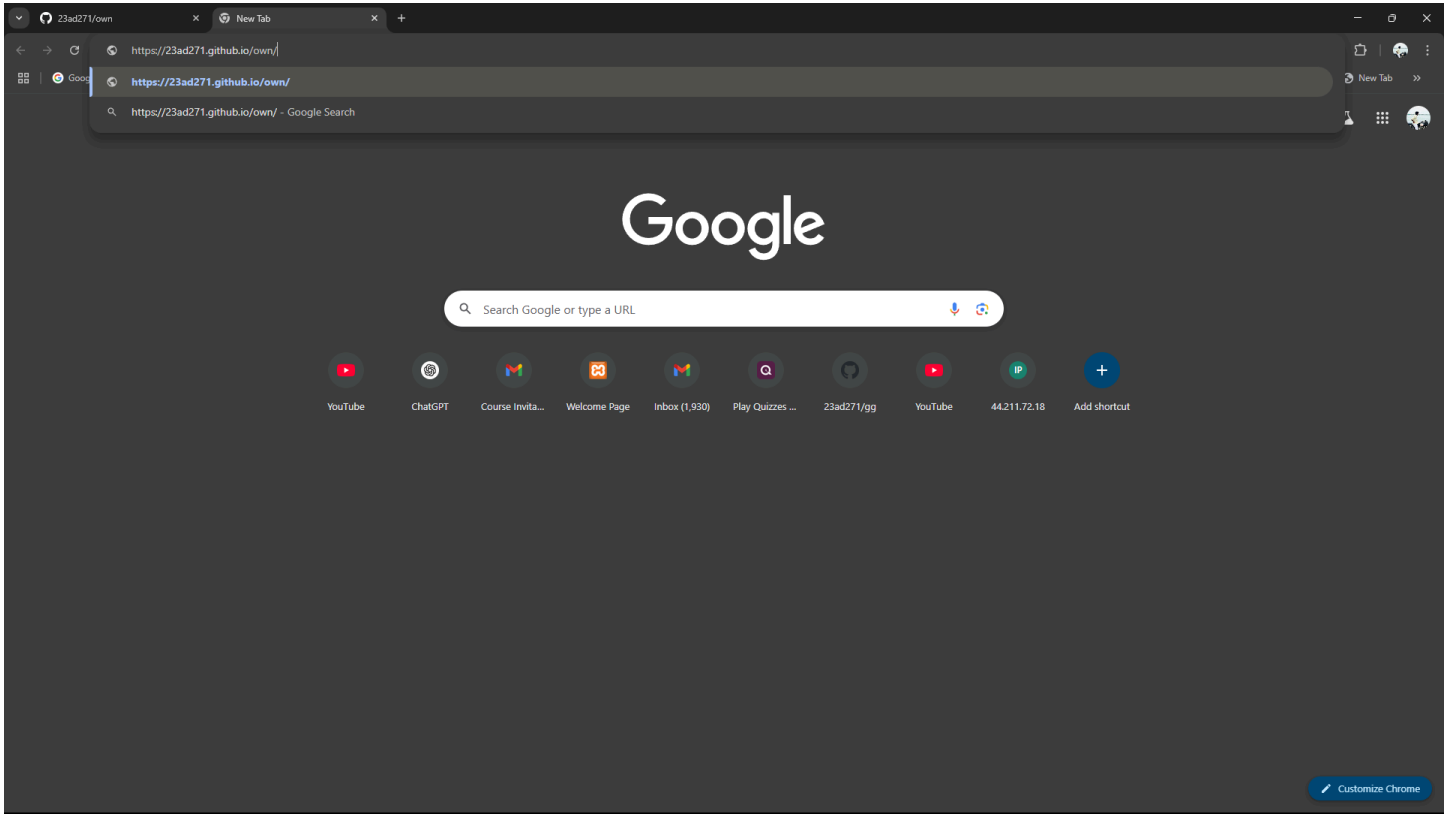

Use the URL for this page when adding GitHub as a remote.
